First Dimension

Bank Account Verify (BAV)

Key Benefits

Fraud Prevention

- ✓ Verify bank account is legitimate and low risk
- ✓ Identify if bank account is associated to multiple loans
- ✓ Identify negative loan events associated with bank account

Reduce Loan Default

- ✓ Receive additional predictive attributes for use in underwriting decisions
- ✓ Use BAV Score as stand-alone model or in conjunction with other scores

Instant Bank Verification (IBV)

The Most Trusted Bank Aggregation & Verification Solution

Speaker: John Kaltenbach

microbilt

Know Your Customer and Assess Their Ability to Pay

IBV is available in these three applications:

✓ **Consumer**

Ideal for retail loan origination, short term lending, auto financing, property rental, and more.

✓ **Mortgage**

Popular among mortgage providers for delivering quick, accurate bank verification.

✓ **Business**

Used by lenders nationwide to evaluate another company's ability to manage loans or credit.

Rock solid security for you, your business and your customers

IBV uses the same security protocols as large banks and major credit card companies. This includes PCI DSS 3.0, SSAE16 Type II Sox1, AICPA, 256 BIT SSL.

Account and transaction information
from over 20,000 financial institutions including
over a dozen of the world's largest banks.

Dedicated Customer Service Available 24/7

Both technical and customer service support to businesses, with product support completely free of charge.
Online chat available during regular business hours during the business week.
Dedicated 800 numbers and inbound email addresses for support purposes.

2 APIs Available

**Available via:
Commercial Software
Website Portal**

**Know Your Customer
& Access
Affordability**

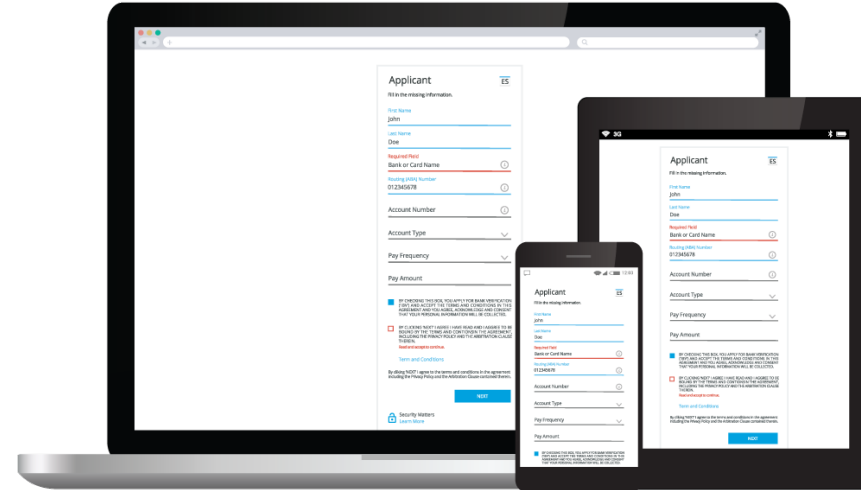

Better Data Means Better Decisions

Gain easy access to comprehensive transactional data

Access to IBV is as Easy as Going Online

Our web portal can be added right into your existing website and your customers can be notified by email, SMS/text messaging or given a direct URL. IBV can even be made available on devices like smartphones and tablets for use on-site.

The more you use, the more you save

We grow as your company grows.

IBV offers a tiered-pricing system ideally suited for both consumer and business- to-business lending. This pricing structure reduces your per transaction cost the more you use IBV. That means IBV delivers cost benefits as your business grows.

IBV Advantages

✓ Better data

Direct access to the account data.
A true, real-time picture of the applicant.
Reduces fraud and need for paper statements.

✓ Unmatched speed & access

Immediate access to data.
Application and data is available
24x7. Dedicated Customer Service

✓ Cost savings

A fraction of the cost of current decision making. Billed on usage (hits only), no implementation fee.
Volume based savings available.

✓ Superior coverage

20,000 financial institutions including
global institutions and regional banks.

RVD Plus+ and RVD Advantage

Speaker: Sheri Reynolds

microbilt

Risk Verify Database

RVD is a shared database owned and managed by MicroBilt. It collects account transactional, status, and ownership history. The database is dynamically updated in real-time, all day every day.

Includes information from:

- financial institutions
- ACH processors
- store front retail and online retail
- alternative lenders
- bill payment
- collection companies
- utility companies

We know your customers

OVER
1,712,536,378
RECORDS

Risk Verify Database

All RVD transactions return a decision code and detailed information on the account including:

- Transaction history – number and dollar amount of past good and returned transactions
- Average number of days it takes for an NSF item to be paid
- The first date the RVD database saw history on the account
- The last date the RVD database saw a transaction on the account
- Up to two first and last names associated with the account when resident in RVD
- Up to two telephone numbers associated with the account when resident in RVD
- Optional OFAC checking

RVD Advantage

Starts with the Risk Verify Database and returns all RVD account information.

Verifies the bank routing number is valid and active in the US.

Utilizes sophisticated algorithms and proprietary processes to ensure the structure of the account presented conforms with the known structure(s) utilized by the bank issuing the account.

Alerts you if the account has been reported as closed or if there are current outstanding unpaid items.

Allows velocity and individual risk settings for every customer.

Returns a decision code of accept, decline or warning.

RVD Advantage – Who Uses It?

#1 Customers with an overall return rate of under 7% and all customers that accept payment information over the telephone or over the Web.

- ✓ Online payments
- ✓ Payments over the telephone
- ✓ Payments entered by computer or cell phone

Reduces overall returns by alerting you if the account has a negative balance due to unpaid returns.

Significantly reduces intentional and fat finger fraud that occurs when the bank information is being entered by the consumer.

RVD Advantage – Who Uses It?

#2 Perfect for re-scrub BEFORE checking more expensive databases.

RVD Advantage costs pennies per transaction.

Adding RVD Advantage at the beginning of your risk waterfall will identify accounts that have a very low probability of returning and those that have a very high probability of returning BEFORE you process the transaction with a higher costs per transaction alternative.

Reduce operational costs with accurate decisioning.

RVD Plus+

In addition to providing account history in the risk verify database, RVD Plus+ looks into multiple financial and retail databases.

Verifies the bank routing number is valid and active in the US.

Utilizes sophisticated algorithms and proprietary processes to ensure the structure of the account presented conforms to the known structure(s) utilized by the bank issuing the account.

Alerts you if the account has been reported as closed or if there are current outstanding unpaid items.

Allows velocity and individual risk settings for every customer.

RVD Plus+

Returns a Decision Code number that allows our customers to determine the level of risk they wish to accept.

- Recognizes and separates out “fatal” history on the account such as account closed, no account found, and invalid account
- Alerts customers when a high number of unauthorized returns have been seen on the account
- Alerts our customers if there are current unpaid returns on the account for any reason

Details the level of good history - minimal, limited or extended.

RVD Plus+ Return Reasons Matter

The most effective way to limited returns to an account and adhere to the NACHA thresholds required to continue processing electronic payments.

0.5% Unauthorized Return Codes

- R05 – reserved
- R07 – authorization revoked
- R10 – not authorized
- R29 – corporate customer, not authorized
- R51 – item is ineligible (RCK)

3.0% Account Data Quality Codes

- R02 – account closed
- R03 – No account found/unable to locate
- R04 – invalid account number

Overall return rate of 15% or less

Preserve bank relationships.

Limit bank charges.

RVD Plus – Who Uses It?

Designed specifically to reduce ACH or e-Check returns and is recommended to our customers that have a higher rate of returns – over 7%, and customers that process payments in high risk industries such as alternative lending, auto lending, rent to own, and buy here pay here.

- ✓ Each customer manages the level of risk they wish to accept by determining which code numbers to accept or decline
- ✓ Our customers can accept payments with NSF returns and reject payments with “fatal” activity on the account such as account closed, account not found or invalid account
- ✓ Provides a look into account history in RVD and additional bank, ACH and retail databases
- ✓ Customers are provided with accurate and detailed information allowing them to manage their specific risk thresholds

Immediately reduces overall returns with a focus on uncollectable returns.

RVD Matrix

Features	RVD Advantage	RVD Plus+
Validates bank routing number	✓	✓
If Driver's License is provided, validates the DL number follows the structure required by issuing state	✓	✓
Checks database for returned and good history on account	✓	✓
Returns know history, name, telephone information	✓	✓
Custom velocity setting for new customers, known customers, and frequently seen customers	✓	✓
Provides Decision Code on all transactions	✓	✓
Provides optional OFAC checking	✓	✓
Validates the structure of the account is correct for the issuing bank	✓	✓
Provides Risk Level code on all transactions		✓
Accesses additional financial an retail database		✓

Easy To Use

Verification only, and easy to integrate

Many similar products are pieces of a larger, costlier platform that requires their customers to process the entire transaction, including the movement of money through them. Not RVD, as a verification-only product, RVD verifies the transaction and allows our customers to retain their current banking relationship.

Available through API, batch, or web

We've made RVD available to merchants and processors in three convenient options. API for software integration, batch processing for users that upload entire batches, and a Web Portal for individual transactions.

Confirms the type of account – checking, savings, money market etc.

Verifies the account is eligible for ACH debits.

Provides the date the account was opened.

Confirms if the account is a joint account and if there are linked accounts at the financial institution.

Requires three-way call with consumer, financial institution, and MicroBilt.

How Does MBV Work?

Records can be processed via batch or API at MicroBilt.

MicroBilt combines proprietary bank networks, electronic inquiries, and manual calls to the financial institutions to provide the highest success rate available to verify funds in a real-time environment.

Includes large financial institutions, small banks, and credit unions.

Two levels of verification to match your requirements.

Results provided as they are completed, no waiting for the entire batch to finish before you know the results.

Why Use Manual Bank Verification?

Improve ACH success rates.

Reduce overall returns and comply with NACHA's thresholds for fatal returns.

Real-time account validation and balance information.

Evaluate ability to pay before issuing loans.

Eliminate administrative, account not found, account closed returns.

Dramatically reduces overdraft fees for you and your customers.

Unlimited validation attempts without harming the consumer.
